Abstracts

A tunneled catheter (tunneled central venous catheter) is a catheter (thin tube) that is placed under the skin of a vein for long-term access. The catheter can be inserted through a peripheral vein or a proximal central vein, most commonly the internal jugular, subclavian, femoral, external jugular, or axillary veins. Tunneled catheters are more suitable for long-term use than non-tunneled catheters. Tunneled catheters can be left in place for weeks, months, or even years. As an advanced medical technology, tunneled catheters provide a safer, more convenient, and more comfortable solution for patients who require long-term infusions and treatments. Most people with tunneled catheters can carry out normal activities, such as work, school, and light exercise. Global key players of Tunneled Catheters include Teleflex, B.Braun, Merit Medical Systems, etc. The top three players hold a share about 55%. North America is the largest market, and has a share about 48%, followed by Asia-Pacific and Europe with share 30% and 20%, separately. In terms of product type, Single-lumen is the largest segment, accounting for a share of 41%. In terms of application, Hospitals is the largest field with a share about 81 percent.
