## Abstracts

A TMR sensor element is a magnetic sensor element using the Tunnel Magneto-Resistance effect (TMR effect). TMR (Tunnel Magneto Resistance) is a new technology, using magneto resistance effect sensors for industrial applications in recent years. Its tunnel magneto resistance effect is induced by magnetic multilayer film material, the rate of resistance change of TMR performs better than AMR's and GMR's. We usually refer TMR to Magnetic Tunnel Junction (MTJ). Comparing with the Hall element, the MTJ element has better thermal stability, higher sensitivity, lower power consumption, better linearity, no additional polyethylene magnetic circular structure. Relative to AMR, TMR has better temperature stability, higher sensitivity, wider linear range and no additional set / reset coil structure; Relative to the GMR, TMR has higher stability in temperature, higher sensitivity, lower power consumption and wider linear range. Global key players of tunneling magnetoresistance (TMR) sensors include TDK, Infineon Technologies, Crocus Technology, Coto Technology, MultiDimension Technology, etc. Global top five manufacturers hold a share over 83%. The key players are mainly located in China, Japan, North America, Europe, and South Korea. In terms of product, linear displacement sensors is the largest segment, with a share over 75%. And in terms of application, the largest application is industrial equipment, with a share over 65%, followed by automotive.
