Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Turbo Compressor (100RT-200RT) for Chiller competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A turbo compressor for chiller, commonly referring to a high-speed centrifugal or magnetic bearing compressor, is a key component used in high-efficiency chiller systems to compress refrigerant vapor and enable effective heat exchange. Unlike traditional positive displacement compressors, turbo compressors operate at very high rotational speeds and often use oil-free magnetic bearings, offering benefits such as reduced energy consumption, lower maintenance, and quieter operation. They are particularly suited for large-scale cooling applications in data centers, commercial buildings, hospitals, and industrial facilities where precise temperature control and energy efficiency are critical. This report only focus products with capacity under 100RT-200RT. The market for turbo compressors in the 100RT-200RT range for chillers is primarily driven by the increasing demand for energy-efficient and environmentally sustainable HVAC solutions in mid-to-large-scale commercial buildings such as office complexes, hospitals, and data centers. As governments and industries push for stricter energy codes and carbon reduction targets, building owners are turning to oil-free, variable-speed turbo compressors that offer superior part-load efficiency, reduced maintenance, and lower total cost of ownership. The compact design and quiet operation of these compressors also align with modern building design requirements. Furthermore, the shift toward green building certifications and the adoption of low-GWP refrigerants are reinforcing the adoption of advanced chiller systems equipped with turbo compressors.

The global Turbo Compressor (100RT-200RT) for Chiller market size was estimated at
