Abstracts

Turboexpander is a machine, which continuously converts kinetic energy into mechanical energy. This is done by expanding the high pressure gas from upstream to a lower pressure downstream through the Expander. The high pressure gas causes the radial expander to rotate. Rotation is transmitted to the shaft, which is supported by a set of bearings. The power transmitted to the shaft can be used to drive a compressor, drive an electrical generator or can be dissipated through an oil brake or air brake.

The global Turboexpander market size was estimated at USD 532.73 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.03% during the forecast period.
