Abstracts

A Turn-based Combat Game is a type of video game in which players and opponents take actions alternately, rather than simultaneously, during combat or gameplay. In this structure, each participant—whether a player-controlled character, party, or AI opponent—acts within a defined turn sequence, making strategic choices such as attacking, defending, casting spells, or using items before yielding control to the next participant.

Gross Margin AnalysisThe gross margin of turn-based combat games is generally high, typically between 45% and 70%, depending on game development costs, platform distribution channels, and lifetime value (LTV). Because these games primarily use DLC and in-app purchases for monetization, their marginal costs are low, and their lifecycles are long, resulting in significantly higher profitability than action or real-time games. In particular, turn-based RPGs or strategy games that combine character development and combat strategy can form a stable user payment ecosystem through continuous content updates and events. Furthermore, the launch of mobile and cross-platform versions further reduces distribution costs, allowing leading companies to maintain high gross margins in the industry for an extended period.

Key DriversThe main drivers of growth in the turn-based combat game market include the return of player strategic preferences, the expansion of IP content ecosystems, the application of AI and cloud computing technologies, and the maturity of global distribution networks. As players demand deeper combat systems and more immersive character narratives, traditional strategy and turn-based gameplay are experiencing a new revival. Meanwhile, the application of AI algorithms in enemy behavior logic, combat balance, and personalized recommendations has significantly enhanced player retention and engagement. Cross-platform data interoperability between mobile and PC, social and competitive mechanisms, and esports-style operational models have also enabled turn-based games to overcome geographical and platform limitations, creating a continuously growing market.

The global Turn-based Combat Game market size was estimated at USD 7283.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.
