Abstracts

The twin clutch transmission (TCT), also known as a dual clutch transmission (DCT), is an advanced type of automated manual transmission that utilizes two separate clutches?one for odd-numbered gears and another for even-numbered gears?to enable rapid, seamless gear shifts without interrupting power delivery to the wheels. By pre-selecting the next gear in anticipation of a shift, TCTs combine the efficiency and direct feel of a manual transmission with the convenience and speed of an automatic, resulting in improved acceleration, fuel economy, and driving dynamics compared to traditional automatic or continuously variable transmissions.

The global Twin Clutch Transmission market size was estimated at USD 12000.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
