Abstracts

Twin screw extruder is the classic machine used for the plastic extrusion process when two or more ingredients are mixed or compounded. The process is best suited when extruding reactive polymeric materials. It has higher economic opportunities and business potential than single screw extruders, owing to higher process flexibility and productivity, to produce wider range of end products, to convert materials and handle product quality more consistently, to compensate the effect of screw wear through screw speed adjustment.

The global Twin Screw Extruders market size was estimated at USD 900.02 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.22% during the forecast period.
