Abstracts

Two-component adhesives are also known as reactive adhesives or structural adhesives. They are characterised by the fact that they cure not because a substance such as a solvent or water evaporates, but because of a chemical reaction. It is absolutely essential for the two required components to be dosed in the correct mixing ratio and for them to be homogeneously - in other words evenly - mixed. It is preferable for 2-component adhesives to be solvent-free.

The global Two Component Adhesive And Sealant market size was estimated at USD 12850.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.35% during the forecast period.
