The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Two-component Toughened Adhesive competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Two-component toughened adhesive is a structural adhesive material composed of a resin matrix and a curing agent, which forms a high-strength adhesive layer through chemical cross-linking and curing. It is widely used in aerospace, rail transportation, automobile manufacturing, electronic packaging, construction engineering and other fields with high requirements for bonding strength and toughness. The adhesive introduces toughening components such as rubber modifiers, nanofillers or flexible segments into the basic formula, so that it has excellent impact resistance, peel strength and fatigue durability while maintaining high-strength bonding force. It is particularly suitable for bonding between dissimilar materials (such as metals and composite materials, plastics and ceramics).

The global Two-component Toughened Adhesive market size was estimated at USD 3569.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
