The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Two-Phase Open-Loop Stepper Motor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Two-Phase Open-Loop Stepper Motor production reached approximately 7.41 million units, with an average global market price of around US\$ 60 per unit. A two-phase open-loop stepper motor is a motor control solution based on two-phase windings that achieves precise, step-by-step rotation of the rotor through stator pulse excitation. Its core feature is that it does not rely on a position feedback sensor (such as an encoder). Instead, it operates in open loop according to a set pulse signal, with each input pulse causing the motor to rotate a fixed step angle. Due to its simple structure, low cost, and easy control, it is widely used in applications with moderate speed and positioning accuracy requirements and controllable loads and operating conditions.

The global Two-Phase Open-Loop Stepper Motor market size was estimated at USD 445.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
