## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Two-Phase Stepper Motor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Two-Phase Stepper Motor production reached approximately 11.4 million units, with an average global market price of around US\$ 65 per unit. A two-phase stepper motor is a precision motor that uses two electromagnetic windings (phase A and phase B) to drive the rotor's gradual rotation in a specific sequence. By controlling the number, sequence, and direction of the energized pulses, precise angular positioning and speed control can be achieved, enabling closed-loop operation without a position sensor. Its rotational angle is determined by the step angle, with common values such as 1.8° and 0.9°. It offers high positioning accuracy, fast response, simple structure, and reasonable cost. It is widely used in applications requiring high-precision positioning, such as CNC machine tools, 3D printers, medical devices, automation equipment, and monitoring instruments.

The global Two-Phase Stepper Motor market size was estimated at USD 741.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
