Abstracts

Two-piece aerosol cans are a type of pressurized container consisting of two primary components: a seamless drawn or impact-extruded body and a dome or top assembly that includes the valve cup and mounting mechanism. These cans are widely used across consumer and industrial sectors for dispensing products in spray or foam form, such as personal care items (e.g., deodorants, hairsprays), household products (e.g., cleaners, air fresheners), automotive sprays (e.g., lubricants, paints), and pharmaceuticals (e.g., topical sprays, inhalers). The two-piece design offers advantages in manufacturing efficiency, structural integrity under pressure, and compatibility with a variety of propellants and formulations. It is distinguished from three-piece cans by its seamless body construction, which reduces leakage risks and allows for more complex shaping and branding. The market for these cans is driven by demand for convenience, portability, and precise product application, as well as innovations in sustainable materials and propellant systems.

The global Two Piece Aerosol Cans market size was estimated at USD 2450.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
