Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Two Piece Clamp-On Shaft Collars competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Two piece clamp-on shaft collars is a mechanical fastening element that consists of two symmetrical halves and is clamped by screws to fix the shaft. It is widely used in conveying equipment, automation machinery, linear guide rail systems, packaging machinery, agricultural equipment and medical devices. Its main functions are to achieve axial positioning, component limiting, part pre-tightening or as a stop ring for transmission components. Compared with the one-piece clamping shaft collar, the two-piece structure is easy to install and disassemble without removing other components on the shaft. It is particularly suitable for occasions with limited space or high requirements for equipment maintenance efficiency. Structurally, it is usually made of high-strength carbon steel, stainless steel or aluminum alloy, and is used with hexagon socket screws to achieve reliable clamping; in high-corrosion or food and medical industries, nickel plating, oxidation or polymer coating are also used. It can provide precise positioning accuracy and high radial clamping force, and is one of the indispensable shaft fastening components in modern equipment.

The global Two Piece Clamp-On Shaft Collars market size was estimated at USD 364.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
