## Abstracts

Two-shot plastic injection molding is a manufacturing process in which two different thermoplastic materials, or two different colors of the same material, are sequentially injected into a single mold to create a single, integrated part. This technique allows for complex designs, multi-material functionality, improved aesthetics, and reduced assembly steps. Commonly used for soft-touch grips, overmolds, functional elastomer components, and decorative parts, it combines precision, automation, and repeatability in producing high-quality components for automotive, electronics, medical, consumer goods, and industrial applications. The two-shot plastic injection molding market value chain begins upstream with raw material suppliers providing thermoplastics, thermoplastic elastomers (TPE), engineering plastics, additives, and colorants, as well as mold steel, precision CNC tooling, and electronic control components. Midstream includes machinery manufacturers, mold designers, and contract molding service providers who design, fabricate, and operate two-shot machines with integrated robotics, heating, and cooling systems. Downstream involves automotive, consumer electronics, medical, household, and industrial manufacturers that use the two-shot molded components in final products, supported by distributors, logistics, and maintenance service providers, ensuring high-volume production, quality compliance, and cost-efficient multi-material component delivery globally. Ongoing projects include expansion of two-shot injection molding capacity in Asia-Pacific for automotive and consumer electronics OEMs, integration of Industry 4.0-enabled molding lines in Europe, and development of multi-material medical device components in North America. Planned initiatives focus on next-generation two-shot machines with higher cycle speeds, servo-driven precision, and energy-efficient operation, alongside smart molds with in-line defect detection. Tier-1 automotive suppliers are commissioning plants for overmolded interior parts, while electronics manufacturers expand production of overmolded wearable components. OEMs are also investing in modular two-shot

lines for rapid product changeover and hybrid material applications to meet sustainability and lightweighting targets globally. 2024 Market Average Gross Profit Margin: 28%.

The global Two Shot Plastic Injection Molding market size was estimated at USD 4205.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
