Abstracts

Two-way V2G(Vehicle-to-Grid) charging station, that is, vehicle to grid, is a technology that allows electric vehicles to charge when the grid load is low and feed power back to the grid when the grid load is high. This kind of charging station not only provides traditional charging services, but also releases stored power during times of peak power demand, helping to balance the grid load and thereby reducing grid stress. In addition, V2G technology can also bring economic benefits to car owners, such as charging when electricity prices are low and selling electricity to the grid when electricity prices are high, achieving the effect of "peak shaving and valley filling".

The global Two-way V2G Charging Stations market size was estimated at USD 4107.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.00% during the forecast period.
