## Abstracts

A two-wheeled vehicle LiFePO4 power battery is a type of lithium-ion battery that uses lithium iron phosphate as the cathode material, specifically designed to provide power to two-wheel vehicles and propel them forward. These batteries typically come in shapes such as square and cylindrical forms. The cathode material, lithium iron phosphate, offers high safety, excellent cycle performance, and a stable charge-discharge platform. The anode commonly employs materials like graphite. The electrolyte serves as the medium for ion transport, while the separator is used to isolate the cathode and anode, preventing short circuits and ensuring the normal operation and safety of the battery.
