Abstracts

Two-wheeled battery replacement services are defined as battery replacement and maintenance services for two-wheeled electric vehicles. The service usually requires the establishment of infrastructure such as power change equipment, such as power change cabinets, power change stations, and lithium batteries, followed by the operation of the online platform. The overall service is a self-service mode, and the end user can replace the battery offline through user applications such as mobile phone apps. The replacement service model eliminates the need for end-users to purchase batteries. The batteries used in the replacement are replaced and maintained by the operator. When using for the first time, the user needs to register the account, identity authentication and purchase the package, scan the code to take out the battery in the change cabinet to use. When using it again later, the user can find the nearby power change cabinet through the mobile phone APP, and put the used battery back into the power change cabinet after scanning the code. Then take out the charged battery in the power change cabinet, and it can be used normally. A single power change usually takes less than a minute. Some operators have infrastructure research and development capabilities to open up the whole industry chain from lithium battery manufacturing, system integration, and operation services. There are also some operators with a strong customer ecology, through the cooperative model to purchase battery equipment, to achieve the combination of power change services. The two-wheeler battery swapping service industry is experiencing rapid growth to the increasing adoption of electric vehicles and the demand for quick, efficient recharging solutions. A trend in the industry is the expansion of swapping station networks to provide widespread and accessible service. Moreover, advancements in battery technology are leading the development of more durable and longer-lasting batteries, reducing the frequency of swaps needed. Integration with mobile applications for seamless user experience and real-time tracking of battery availability is also becoming a standard.

Additionally, there is a growing trend towards sustainable and eco-friendly practices, with companies focusing on the recycling and proper disposal of spent batteries.

The global Two-wheeler Battery Swapping Service market size was estimated at USD 2907.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.10% during the forecast period.
