Abstracts

The two-wheeler crash guard, also known as a crash bar or engine guard, is a protective accessory designed to shield a motorcycle or scooter's critical components—such as the engine, frame, and fairings—from damage in the event of a fall, tip-over, or low-speed collision. Typically constructed from durable materials like steel or aluminum alloy, these guards are engineered to absorb and distribute impact forces, thereby minimizing repair costs and enhancing rider safety by preventing direct contact between the ground and vulnerable parts. Available in various designs, including single or multiple bars, and often customizable for specific bike models, crash guards serve both functional and aesthetic purposes, appealing to riders seeking to protect their investment while adding a rugged or sporty appearance to their vehicle.
