Abstracts

Two wheeler integrated rear - view mirrors are rear - view mirror products specially designed for two - wheeled vehicles (such as motorcycles and electric bicycles). The term "integrated" means that it not only has the basic function of a traditional rear - view mirror for observing the rear situation, but also integrates other functions or components. This may include integrating turn signals, making the turn signals and the rear - view mirror blend in appearance, which not only enhances the aesthetics of the vehicle but also provides a clearer and more prominent signal when turning. It may also integrate electronic devices such as cameras and sensors to enable advanced functions like reverse imaging and blind - spot monitoring, improving the safety and convenience of riders. This integrated design optimizes the overall layout of two - wheeled vehicles, reducing the number of components and the occupied space.

The global Two Wheeler Integrated Rear-view Mirrors market size was estimated at USD 367.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
