Report Overview:

A two-wheeler shock absorber or damper is a mechanical device that is designed to reduce shock impulse or smooth out by dissipating kinetic energy. Two-wheeler shock absorbers reduce the discomfort while traveling caused due to rough roads or uneven terrain, improving ride quality, and they also enhance comfort by substantially reducing the amplitude of jerks and disturbances. Shock absorbers absorb the energy from the springs and do not transfer them to the vehicle. Shock absorbers need to have soft springs in order to control the excessive suspension movement while controlling the rate of movement in response to the bumps.

Shock absorbers are a major component of two-wheelers, including motorcycles, to provide smooth riding, these jerks can cause wear & tear in the absence of shock absorbers. Moreover, jerks or shocks exerted by the two-wheeler can weaken the vehicle frame and joints. While riding a two wheeler, shocks or bumps can cause discomfort to the rider as well as pillion. It can also weaken the bolts and joints of the two wheeler.

The Global Two-Wheeler Shock Absorber Market Size was estimated at USD 6395.82 million in 2023 and is projected to reach USD 8139.56 million by 2029, exhibiting a CAGR of 4.10% during the forecast period.
