Report Overview

A Type 2 Surge Arrester is an electrical device designed to protect electrical systems from voltage surges, particularly those caused by lightning strikes or other transient overvoltages. It is classified as a Type 2 arrester according to the International Electrotechnical Commission (IEC) standards, which categorizes surge arresters based on their discharge voltage levels and energy absorption capabilities. Type 2 arresters are characterized by their ability to handle higher discharge voltages and absorb greater energy levels compared to Type 1 arresters. They are typically installed in medium voltage distribution networks and are engineered to divert excessive voltage surges safely into the ground, thereby preventing damage to equipment and ensuring the continuity and reliability of electrical power supply. These arresters are crucial components in the protection of electrical infrastructure, especially in areas prone to severe weather conditions that can generate high-intensity electrical discharges.
