Report Overview

The Type C bulk bag, also known as a FIBC (Flexible Intermediate Bulk Container), is a specialized industrial packaging solution designed for transporting and storing dry, flowable materials such as powders, granules, and other bulk solids. Constructed from woven polypropylene fabric, Type C bulk bags are distinguished by their static-conductive properties, which prevent the buildup of electrostatic charges—a critical safety feature when handling flammable or combustible materials in industries like chemicals, pharmaceuticals, and food processing. These bags typically feature integrated conductive threads or liners that safely dissipate static electricity to the ground, reducing the risk of sparks that could ignite dust or vapors. Available in various sizes and load capacities (ranging from 500 kg to 2,000 kg), Type C FIBCs are widely used in environments where static control is mandatory, such as oil and gas, plastics, and agrochemical sectors. Their design often includes additional safety features like lifting loops, baffles for stability, and liners for moisture or contamination protection, making them a versatile and compliance-driven choice for hazardous material handling.

This report offers a comprehensive and in-depth analysis of the global Type C Bulk Bag market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
