Report Overview

T-type thermocouple, also known as copper-constantan thermocouple (copper/nickel-copper thermocouple, graduation number T, measuring range -200~+350?), is also the best thermocouple for measuring low temperature and cheap metals. Its positive electrode (TP) is pure copper, and its negative electrode (TN) is copper-nickel alloy, which is called constantan. It is common with constantan EN of nickel-chromium-constantan, but cannot be used with constantan JN of iron-constantan. Although they are both called constantan, the measuring temperature range of copper-copper-nickel thermocouples is -200~350?.
