## Abstracts

The U-shape linear motor is a type of linear electric motor featuring a U-shaped magnetic circuit design, which enables linear motion. Compared to traditional linear motors, the U-shape design provides higher stability and efficiency by offering a more uniform magnetic field distribution. The motor typically consists of a stator and a mover, with the mover moving along the linear path within the stator's magnetic field, delivering precise linear drive. U-shape linear motors are widely used in high-precision positioning systems, automation equipment, industrial robots, and other applications requiring fast response speeds and low friction. Advantages of this motor include low noise, reduced friction, and a longer service life, making it suitable for continuous, high-frequency operation.

The global U-shape Linear Motor market size was estimated at USD 468.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
