Abstracts

The U-slot linear motor is a type of linear motor that uses a U-shaped slot configuration to guide the movement of the motor's coil, providing smooth and precise linear motion. The stator, with its U-shaped slots, creates a uniform electromagnetic field that interacts with the coil in the mover, resulting in direct linear motion without the need for mechanical transmission elements like gears or belts. This motor type is often used in applications that require high-speed, high-precision motion, such as robotics, semiconductor manufacturing, and automation systems.

The global U-slot Linear Motor market size was estimated at USD 502.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
