The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on UART to I²C Bridge IC competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The UART to I²C bridge control chip is a special integrated circuit used to realize protocol conversion and data transfer between the serial asynchronous communication interface (UART) and the synchronous serial bus interface (I²C). It integrates the UART transceiver and the I²C controller. It encapsulates the byte data received by the UART into I²C host or slave messages through fixed or configurable mapping logic, or converts the read and write requests on the I²C bus into UART data streams, thereby simplifying the hardware design and software development between the microcontroller and the I²C peripherals. It plays an important role when it is necessary to connect UART-based serial devices to the I²C network or to realize multi-protocol interconnection in resource-constrained systems.

The global UART to I²C Bridge IC market size was estimated at USD 73.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
