Abstracts

A UAV (Unmanned Aerial Vehicle) Antenna Tracker is a device used to track and maintain a stable connection between a UAV and its ground control station. It consists of an antenna mounted on a pan-tilt mechanism that can move and track the UAV's position in real-time. The tracker uses various sensors, such as GPS and IMU (Inertial Measurement Unit), to determine the UAV's location and orientation. It then adjusts the position of the antenna to maintain a strong signal between the UAV and the ground control station. The UAV Antenna Tracker is particularly useful in scenarios where the UAV is flying at long distances or in areas with obstacles that may interfere with the signal. By continuously tracking the UAV's position, the tracker ensures a reliable and uninterrupted connection, allowing for real-time control and data transmission.

The global UAV Antenna Tracker market size was estimated at USD 1938.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.60% during the forecast period.
