## Abstracts

The UAV unmanned operation platform is an integrated system that combines UAVs, UAV nests (or launch and recovery systems), and UAV operation management software. It utilizes a remote management system to assign tasks to UAVs, which then automatically take off from their nests to perform large-scale inspection and surveillance missions, thereby fully liberating human labor and improving operational efficiency. The platform enables intelligent UAVs to conduct automated patrols and inspections around the clock (7x24 hours) without requiring personnel on site, standing ready to reconnoiter and intervene in emergencies at any time. The UAV nest typically boasts high wind resistance, a high protection rating, and a large operational radius, integrating automatic takeoff and landing, a battery swapping system, and an all-weather meteorological monitoring station. This allows UAVs to takeoff and land remotely, swap batteries automatically, operate autonomously, and execute tasks according to remotely programmed flight plans.

The global UAV Unmanned Operation Platforms market size was estimated at USD 717.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
