Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on UBI Smart Terminal Devices competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of UBI Smart Terminal Devices will reach 116.76 million units, with an average selling price of US\$60.71 per unit. UBI smart terminal devices are based on UBI (Usage-Based Insurance) technology. Using the Internet of Things (IoT), sensors, and mobile communications, they collect real-time vehicle operating status and driving behavior data (such as mileage, fuel consumption, sudden acceleration, and sudden braking) and upload it to a cloud platform for analysis. Their core function is to provide insurance companies with accurate risk assessments, enabling differentiated premium pricing, while also offering users driving optimization recommendations to reduce accident rates. Data connectivity is key to UBI insurance and a key infrastructure component that major insurance companies are vying for. For example, based on vehicle installation method, UBI models can be categorized as pre-installed Telematics + UBI and after-installed OBD + UBI. The former is led by automakers, who, driven by safety concerns and their own interests, are less open about data. The latter, led by insurance companies, is progressing more rapidly, with some insurance companies already collaborating with OBD manufacturers.

The global UBI Smart Terminal Devices market size was estimated at USD 7089.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
