Abstracts

The UHF flexible anti-metal tag is a specialized type of radio-frequency identification (RFID) tag designed to operate effectively when attached to metallic surfaces, overcoming the signal interference and performance degradation typically experienced by standard RFID tags in such environments. These tags are constructed using flexible materials, such as polymers or specialized substrates, which incorporate electromagnetic isolation layers or ferrite-based shielding to minimize the negative effects of metal, ensuring reliable read ranges and data accuracy. Commonly used in asset tracking, inventory management, and logistics within industries like manufacturing, aerospace, automotive, and retail, these tags enable seamless identification and monitoring of metal-bound items, tools, equipment, and containers, offering durability, adhesion versatility, and resistance to environmental factors such as moisture, heat, and physical stress.

The global Uhf Flexible Anti Metal Tag market size was estimated at USD 290.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.80% during the forecast period.
