## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on UHV Series Compensation System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The series compensation system is a device used in power systems, mainly used to improve the transmission capacity of transmission lines, improve the power factor of the power grid, reduce power losses and enhance the stability of the power grid. It adds capacitors or inductors to the transmission lines to change the reactance characteristics of the lines, thereby adjusting the flow of reactive power and achieving the purpose of optimizing the operation of the power system. In Ultra High Voltage (UHV) transmission lines (like 1000kV AC or 800kV DC), Series Compensation Systems are capacitor banks installed in series with the transmission line conductors.

The global UHV Series Compensation System market size was estimated at USD 210.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
