## Abstracts

Ultra-high voltage direct current (UHVDC) technology refers to the use of transmission lines with a rated voltage exceeding 800 kilovolts (kV) in direct current transmission systems. UHVDC technology has a very high transmission capacity and can achieve long-distance, large-scale power transmission. It is widely used in power systems to improve transmission efficiency and reduce energy losses. The converter transformer is the core power equipment connecting the AC power grid and the converter station (rectifier or inverter). Its function is to convert the AC voltage to a voltage level suitable for the operation of the converter and provide the necessary electrical isolation. In the ultra-high voltage direct current (UHVDC) system, the converter transformer is usually used in converter stations with ultra-high voltage levels such as 800kV and 1100kV, and has super strong electrical insulation, heat dissipation and mechanical strength.

The global UHVDC Converter Transformers market size was estimated at USD 3012.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
