Abstracts

Glass fiber filtration paper, often referred to as glass fiber filter paper or glass microfiber filter paper, is a type of filter medium made from fine glass fibers. These fibers are randomly arranged to form a matrix with a high surface area and are commonly used in various filtration applications due to their advantageous properties. Ultra High-Efficiency Air Filter with Glass Fiber Paper (Ultra High-Efficiency Air Filter with Glass Fiber Paper) is a filter material used to provide excellent air filtration performance. This type of filter is typically designed for use in highly clean environments such as medical facilities, laboratories, electronics manufacturing, pharmaceuticals and other locations where air quality is critical. Typically captures over 99.97% of 0.3 micron particles. Ultra-high efficiency fiberglass filter paper is a specialized material designed for advanced air filtration systems, particularly in ULPA filters. Its ultra-fine glass fiber composition enables it to capture 0.1-0.3 μm particles with over 99.9995% efficiency, making it an essential component in medical, pharmaceutical, semiconductor, and nuclear industries. Compared to conventional filter media, fiberglass filter paper offers lower airflow resistance, enhancing energy efficiency in air purification systems. Additionally, it boasts high thermal resistance, chemical stability, and long service life, making it ideal for demanding environments such as cleanrooms, biosafety facilities, and industrial purification systems. As air quality regulations become stricter and smart filtration technologies advance, ultra-high efficiency fiberglass filter paper is evolving towards lower resistance, higher efficiency, and eco-friendly materials, driving innovation in the air filtration industry.

The global Ultra-efficient Glass Fiber Filtration Paper market size was estimated at USD 114.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
