Abstracts

Ultra-High-Temperature (UHT) Pasteurized Milk is a type of milk that undergoes Ultra-High Temperature (UHT) processing to extend its shelf life. During this process, milk is heated to 135-150°C (275-302°F) for 2-5 seconds, effectively eliminating harmful microorganisms and pathogens while preserving most of its nutritional value. UHT-treated milk can be stored for up to 6 months without refrigeration, maintaining its quality and safety. Due to its convenience in storage and transportation, UHT milk is widely used in the production of long-shelf-life dairy products and is popular in supermarkets, school meal programs, outdoor activities, and emergency food supplies worldwide.

The global Ultra-High-Temperature Pasteurized Milk market size was estimated at USD 80370.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
