Report Overview

An ultra long-acting GLP-1RA, or Ultra Long-acting Glucagon-Like Peptide-1 Receptor Agonist, is an advanced medication designed for the treatment of type 2 diabetes and obesity. What sets ultra long-acting GLP-1RAs apart is their extraordinarily extended half-life, allowing for significantly less frequent administration, often as infrequently as once per week or even less frequently. These medications exert multiple beneficial effects, including enhancing insulin secretion from the pancreas, suppressing glucagon release, which lowers postprandial blood sugar levels, and effectively reducing fasting blood sugar levels. Moreover, ultra long-acting GLP-1RAs deliver an enhanced and sustained impact on weight loss, making them a promising option for individuals seeking comprehensive and extended glycemic and weight management benefits.

The global Ultra Long-acting GLP-1RA market size was estimated at USD 12300 million in 2023 and is projected to reach USD 24180.98 million by 2032, exhibiting a CAGR of 7.80% during the forecast period.
