Abstracts

An ultra short throw (UST) screen is a specialized projection surface designed to work with ultra short throw projectors, which are capable of projecting large, high-resolution images from very short distances?typically just a few inches away from the screen surface. These screens are engineered to optimize image quality by mitigating issues such as ambient light interference, color distortion, and hotspotting that can occur with standard projection screens when used with UST projectors. They often incorporate advanced optical technologies, such as ambient light rejecting (ALR) layers or lenticular structures, which enhance contrast, black levels, and overall brightness uniformity, ensuring a vivid and immersive viewing experience even in moderately lit environments. As an integral component of UST projection systems, these screens enable compact, space-saving home theater and professional setups, eliminating the need for ceiling mounts or long throw distances while maintaining premium visual performance.

The global Ultra Short Throw Screen market size was estimated at USD 1280.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.30% during the forecast period.
