Abstracts

Ultra thin aerogel blanket refers to a highly advanced thermal insulation material composed of silica aerogel reinforced with fibrous batting and often laminated with flexible barriers, resulting in an exceptionally thin, lightweight, and flexible product with unparalleled thermal resistance. Characterized by nanoporous structures that minimize heat transfer through conduction, convection, and radiation, these blankets typically feature thicknesses ranging from 1mm to 10mm while offering thermal conductivity values as low as 0.015-0.025 W/m²K. They are engineered for applications where space, weight, and performance are critical constraints, providing superior insulation without the bulk associated with traditional materials like fiberglass or mineral wool. Key attributes include hydrophobicity, flame resistance, and durability under compression, making them suitable for demanding environments across aerospace, automotive, construction, and industrial sectors.

The global Ultra Thin Aerogel Blanket market size was estimated at USD 385.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
