Report Overview

An ultra-thin ambient light sensor is an electronic device used to detect light. Ultra-thin ambient light sensor are single-chip lux meter, designed to measure the intensity of visible light as seen by the human eye. In simple terms, Ultra-thin ambient light sensor are essentially used for backlighting controls for display devices. These ultra-thin ambient light sensor are commonly used to adjust display brightness of a certain device based on the brightness of the outside condition. These devices are specifically designed to fit into tiny spaces. The sensor has precision spectral response which fixedly matches the photopic response of the human eye, and with strong infrared (IR) rejection regardless of the light source and measures the intensity of light as seen by the human eye.
