Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ultra-thin Copper Foil competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Electrolytic Copper Foil is the copper foil produced by the electrolytic method, which is made by dissolving the copper material into a copper sulfate solution. In professional electrolysis equipment, the solution is made into the original foil by direct current electrodeposition. Ultra-thin copper foil is a key material in batteries and other electronic fields, and its thickness is generally 2-5 μ m. But for high-end market demand, the market demand for copper foil with a thickness of less than 5 μ m is showing an upward trend. Global Ultra-thin Copper Foil key players include SK Nexilis, Mitsui Mining & Smelting, ILJIN Materials, Nippon Denkai and UACJ Foil Corporation, etc. Global top five manufacturers hold a share over 70%. In terms of product, 2-5 μ m is the largest segment, with a share about 70%. And in terms of application, the largest application is IC Substrate, followed by Coreless Substrate, etc. The market trend of ultra-thin copper foil is showing a rapid growth trend, mainly driven by emerging industries such as 5G communications, flexible electronics, lithium batteries, and semiconductor packaging. As terminal products such as smartphones and wearable devices continue to develop in the direction of thinness and miniaturization, higher performance requirements are put forward for flexible circuit boards (FPCs), driving the demand for high-strength, high-conductivity, and low-thickness copper foil to continue to rise. At the same time, in the field of new energy vehicles, ultra-thin copper foil is an important component of the negative electrode current collector of lithium batteries. Its conductivity and mechanical properties are directly related to the battery energy density and safety. It is a key material under the development trend of high energy density of power batteries.

The global Ultra-thin Copper Foil market size was estimated at USD 4139.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 23.30% during the forecast period.
