Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ultra-thin Copper Foils competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Ultra-thin copper foil is widely used in cutting-edge fields such as flexible circuit boards (FPCs), lithium-ion battery current collectors, 5G high-frequency and high-speed communications, high-end display modules, and semiconductor packaging. It has excellent conductivity, ductility, and heat resistance, and is a key material for the lightweight and miniaturization of modern electronic products. Ultra-thin copper foil is usually manufactured by electrolysis or calendaring. Electrolytic copper foil is more suitable for large-scale production and has good surface flatness and processing consistency; calendered copper foil has higher strength and bending resistance, and is suitable for high-reliability occasions. With the rapid development of 5G communications, wearable devices, and new energy vehicle industries, higher requirements are placed on the performance of copper foil, which promotes the development of ultra-thin copper foil towards lower thickness, higher strength, and better adhesion. Global Ultra-thin Copper Foil key players include SK Nexilis, Mitsui Mining & Smelting, ILJIN Materials, Nippon Denkai and UACJ Foil Corporation, etc. Global top five manufacturers hold a share over 71%. In terms of product, 2-5 μ m is the largest segment, with a share about 68%. And in terms of application, the largest application is IC Substrate, followed by Coreless Substrate, etc. The market development of ultra-thin copper foil is in a stage of rapid expansion, thanks to the booming downstream high-tech industries, especially in the fields of 5G communications, flexible displays, new energy vehicles, energy storage batteries and high-end PCBs. In recent years, with the continuous pursuit of thinness and high integration of smart terminal devices, the demand for flexible circuit boards has

increased significantly, driving the widespread application of ultra-thin copper foils of 6µm and below. At the same time, the upgrading of power battery technology towards high energy density has prompted the continuous reduction of the thickness of ultra-thin copper foil for lithium batteries, and put forward higher requirements for its strength, tensile properties and processing accuracy.

The global Ultra-thin Copper Foils market size was estimated at USD 4153.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 23.50% during the forecast period.
