Abstracts

Ultra thin non woven fabric is a lightweight, engineered textile material characterized by its fine fiber structure and low basis weight, typically ranging from 8 to 20 grams per square meter (gsm). It is manufactured through processes such as spunbond, meltblown, or airlaid technologies, which bond or interlock synthetic or natural fibers without weaving or knitting. The fabric is prized for its breathability, softness, flexibility, and disposability, making it suitable for applications where minimal bulk, high surface area, and barrier properties are essential. It differs from traditional nonwovens by emphasizing reduced thickness while maintaining functional performance, often incorporating specialized treatments for hydrophobicity, filtration, or antimicrobial properties depending on end-use requirements.

The global Ultra Thin Non Woven Fabric market size was estimated at USD 4500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
