Report Overview

A centrifuge is a device that separates a liquid phase heterogeneous system by centrifugal force. Depending on the sedimentation coefficient, mass, density, etc. of the substance, the method of applying strong centrifugal force to separate, concentrate and purify the substance is called centrifugation. Generally speaking, the centrifuge with a speed of more than 10000r/min is called ultracentrifugation. Ultracentrifuges are laboratory centrifuges and are widely used in scientific research, education and production departments such as biology, chemistry, and medicine. It uses the strong centrifugal force generated by the high-speed rotation of the rotor to separate liquid and solid particles or components in liquid mixtures, and is suitable for rapid separation and synthesis of trace samples.

The global Ultracentrifuge market size was estimated at USD 1261.30 million in 2023 and is projected to reach USD 3386.85 million by 2032, exhibiting a CAGR of 11.60% during the forecast period.
