Report Overview

Nickel begins as ore and is mined primarily in Indonesia and the Philippines for consumption in the worldwide steel industry. Its consumption in electronics began almost simultaneously in nickel metal hydride batteries and MLCC electrodes. Its consumption in MLCC electrodes requires the added technical prowess of precipitation of metals into powders. Powder is then converted into inks and pastes by the merchant market or by the electronic component manufacturer in a captive process. Nickel conversion into powder and paste for MLCC electrodes is dominated almost exclusively by Japanese technology houses, with only minor players operated in China, Europe and the Americas.

The global Ultrafine Nickel Powder For MLCC Electrode market size was estimated at USD 723 million in 2023 and is projected to reach USD 1494.18 million by 2032, exhibiting a CAGR of 8.40% during the forecast period.
