Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ultralight Carbon Badminton Racket competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global ultralight carbon badminton racket production reached approximately 5.1 million units, with an average global market price of around US\$ 200 per unit. Ultralight carbon badminton rackets are made of high-strength carbon fiber composite materials, and usually weigh ~80 grams (4U and below), and some extreme models can reach 60-70 grams (6U-7U). This type of racket is based on lightweight design, with low wind resistance racket frame, elastic middle shaft and other technologies, which significantly improves the swing speed, suitable for fast attack and defense, doubles flat block and other playing methods, while taking into account shock absorption to reduce arm load, and is favored by amateur players and professional athletes. The market outlook for ultralight carbon badminton rackets is optimistic, with steady growth expected in the coming years. This is primarily due to the continued global popularity of badminton, rising consumer demand for high-performance sports equipment, and advances in materials science and manufacturing processes, which have made lighter and stronger rackets possible. Development will likely trend towards higher material performance, stronger intelligent interaction capabilities, and broader integration with sports and health.

The global Ultralight Carbon Badminton Racket market size was estimated at USD 1025.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
