## Abstracts

Ultralight helicopters are a distinct category of rotorcraft characterized by their minimal weight, compact size, and simplified design, typically falling under aviation regulatory frameworks that permit operation with reduced certification and licensing requirements compared to conventional helicopters. These aircraft are defined by a maximum takeoff weight generally not exceeding 254 pounds (115 kg) under FAA Part 103 regulations in the United States, though definitions vary by jurisdiction, and they often feature open-frame or minimal-enclosure designs, single-seat or two-seat configurations, and piston engines rather than turbines. Key design elements include lightweight composite materials, compact rotor systems, and simplified avionics, prioritizing ease of use, affordability, and recreational or personal transportation purposes over the complex capabilities of commercial or military helicopters.

The global Ultralight Helicopters market size was estimated at USD 250.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
