Report Overview

Ultralight trikes, also known as weight-shift control aircraft or microlight trikes, are lightweight, three-wheeled powered aircraft characterized by their simple design, open cockpit, and hang glider-style wings. These vehicles combine elements of traditional hang gliding with motorized propulsion, offering a cost-effective and accessible form of recreational and sport aviation. They typically feature a delta wing or flexible wing for lift, a small engine for thrust, and a trike-style undercarriage for ground handling, making them popular among aviation enthusiasts seeking an affordable alternative to conventional light aircraft. Their versatility allows for use in leisure flying, flight training, and even specialized applications like aerial photography or surveillance, though regulatory classifications vary by region, often falling under microlight or light-sport aircraft categories. The market for ultralight trikes is niche but growing, driven by demand for personal aviation solutions that balance affordability, ease of use, and low maintenance compared to traditional planes.
