Abstracts

Ultrasonic animal repellents are electronic devices designed to deter unwanted animals, such as rodents, insects, birds, and larger mammals, by emitting high-frequency sound waves that are inaudible or distressing to target species while remaining outside the typical hearing range of humans and domestic pets like dogs and cats. These devices operate on the principle of creating an uncomfortable auditory environment that encourages pests to leave the area, and they are commonly used in residential, agricultural, commercial, and industrial settings to protect property, crops, and stored goods from damage or contamination without resorting to chemical or lethal means.
