### Report Overview

Ultrasonic cavitation machine is a localized fat-burning machine used for cosmetic and beautifying procedures to get rid of fat from problem areas like belly, waist, thighs, glutes, upper arm, and face.

These machines are a non-invasive and pain-free alternative to liposuction. They use high-frequency heat and sound waves that penetrate your skin to break down the fat cells. The liquefied fat cells are then excreted naturally by the liver through the lymphatic system.
