Abstracts

An Ultrasonic Cement Analyzer (UCA) is a specialized instrument used in the construction and oil and gas industries to assess the quality and properties of cementitious materials, particularly cement and concrete. This non-destructive testing (NDT) device employs ultrasonic technology to determine various parameters, such as the compressive strength, porosity, and setting time of cement-based materials. Ultrasonic Cement Analyzers are valuable tools for quality control and assurance in construction and infrastructure projects, ensuring that cementitious materials meet required specifications and standards. According to the Japan Cement Association, Japan's cement industry emitted about 40 million tons of carbon dioxide in 2020. And the cement industry became the fourth largest source of carbon dioxide emissions in the industrial sector after electricity, steel and chemicals. 60% of the cement industry's carbon emissions come from process emissions, 35% from combustion emissions and 5% from indirect emissions from electricity. According to our ?Building Materials Research Institute?, the global clinker capacity in 2022 was about 3.55 billion tons, and the global cement production was about 4.0 billion tons. According to the National Bureau of Statistics, China's cumulative cement output reached 2.118 billion tons in 2022.

The global Ultrasonic Cement Analyzer market size was estimated at USD 7072.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
