Abstracts

Ultrasonic clamp-on gas flow meters are non-invasive devices that measure the flow rate of gases within a pipe using ultrasonic waves. By clamping onto the exterior of the pipe, these meters eliminate the need for cutting or altering the pipeline, ensuring easy installation and maintenance. They utilize the transit-time difference method, where ultrasonic signals are transmitted and received through the gas. The difference in transit times between the upstream and downstream signals is used to calculate the flow rate accurately. These meters are ideal for applications requiring precise flow measurements without disrupting the flow or compromising the integrity of the pipeline.

The global Ultrasonic Clamp On Gas Flow Meters market size was estimated at USD 381.16 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.40% during the forecast period.
